

# ENSURE YOUR WATER'S SAFETY AND QUALITY THROUGH INSPECTION AND TESTING

While some contaminants will change the appearance or taste of water, others cannot be seen, smelled or even tasted.

## THE SECURITY OF KNOWING

Get the security of knowing your well and septic systems are in proper working condition. Safe and high quality water shouldn't be a guessing game.

## PROBLEM DETECTION

Many state and federal agencies recommend private wells be tested at least once a year for coliform bacteria and nitrate.

## FAST, ACCURATE RESULTS

Results from inspections are completed in three to five business days. You are provided with a detailed report including original status and findings of your well and septic system, maintenance suggestions, and any recommended corrective work or repairs.

Wisconsin State-Certified Laboratory Number: MW-0291

## POST-CLOSING WATER TREATMENT INSPECTION

The inspection of water treatment equipment is generally not included as part of a well or home inspection. The **Clean Water Center** provides this inspection for FREE. Once you move into your new home; simply give us a call.

### OUR EXPERIENCED CONSULTANT WILL:

- ▶ Walk you through what the equipment is doing and why
- ▶ Test your water before and after your treatment equipment (free of charge)
- ▶ Provide you with information on how to properly maintain your treatment equipment
- ▶ Provide you with information regarding repair or replacement of equipment, if needed

## WELL SYSTEM INSPECTIONS

Water is one of a home's most important features. However, many people looking to buy or sell a home often overlook the inspection of the well.

The continued supply of clean, safe water is dependent upon the well's condition — ensured through professional inspection and testing.

### MUNICIPAL WATER vs. WELL WATER

Homeowner is billed for water supply

Tested on a regular basis for over 90 possible contaminants

All maintenance on system is performed by municipality

Well owner does not pay for water (other than initial construction)

Well owner responsible for testing the water quality

Well owner responsible for maintenance of well

For complete confidence in your well system, trust Clean Water Testing's friendly, fully licensed and insured inspection service representatives.

## WATER TESTING SERVICES

A home's well water can become contaminated at any time without one's knowledge. Common causes include failure of the well or septic system, livestock waste, agricultural and lawn chemicals, and naturally occurring elements. Testing is the only way to know your well water is safe.

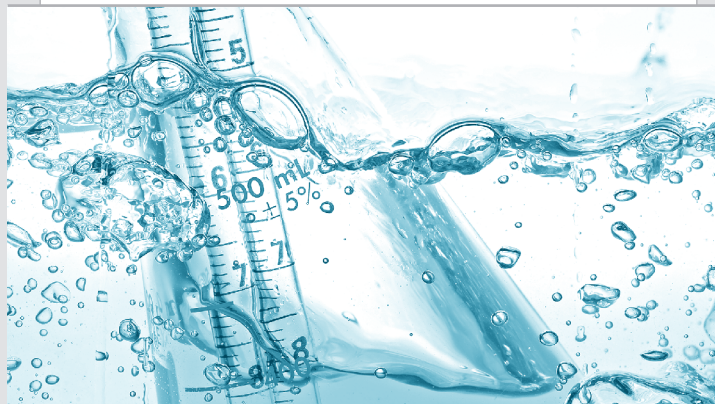

### PROVEN RESULTS:

- ▶ Clean Water Testing has earned the respect of both state agencies and homeowners alike.
- ▶ Receive accurate testing along with prompt and professional service and consultation.

Clean Water Testing, a state-certified laboratory, has been helping customers since 1985. It's easy to have your water sample tested for everything from bacteria to nitrates to arsenic.

The following are contaminants found in residential Wisconsin wells:

- ▶ Coliform Bacteria
- ▶ Chlorides
- ▶ Fluoride
- ▶ Nitrates
- ▶ Nitrites
- ▶ Sulfates
- ▶ Arsenic
- ▶ Copper
- ▶ Lead

Get the security of knowing your water is clean and safe.

## SEPTIC SYSTEM INSPECTIONS

Septic system costs can range anywhere from \$4,000 to \$25,000. Keeping this important home investment in good working order calls for regular, professional inspections.

Septic system headaches and repair costs can be easily avoided. Simply have your septic system inspected by a professional any time, and especially before you buy or sell.

### SERVICES INCLUDE INSPECTION OF:

- ▶ Septic system
- ▶ Pumping chambers
- ▶ Baffles
- ▶ Drain field
- ▶ Mounds
- ▶ and much more

Clean Water Testing inspection professionals have the training and experience to keep your system operating perfectly.
