Ensure Your Water's Safety and Quality Through Inspection and Testing

While some contaminants will change the appearance or taste of water, others cannot be seen, smelled or even tasted.

THE SECURITY OF KNOWING

Get the security of knowing your well and septic systems are in proper working condition. Safe and high quality water shouldn't be a guessing game.

PROBLEM DETECTION

Many state and federal agencies recommend private wells be tested at least once a year for coliform bacteria and nitrate.

FAST, ACCURATE RESULTS

Results from inspections are completed in three to seven business days. You are provided with a detailed report including original status and findings of your well and septic system, maintenance suggestions, and any recommended corrective work or repairs.

Quick Solutions for Water Problems

- Testing may indicate unsafe levels of nitrate or arsenic.
- Other problems may include bad taste or smell, stains or residue.
- A proven, cost-effective Water-Right treatment system is available to solve any water problem.
- Systems include softeners, conditioners, filters, reverse osmosis and ultraviolet units.

Even if your water is "safe," it doesn't always mean that the quality of the water is what you desire.

Well Systems
Inspections

Water is one of a home's most important features. However, many people looking to buy or sell a home often overlook the inspection of the well.

The continued supply of clean, safe water is dependent upon the well's condition — ensured through professional inspection and testing.

MUNICIPAL WATER vs. WELL WATER

Homeowner is billed for water supply	Well owner does not pay for water (other than initial construction)
Tested on a regular basis for over 90 possible contaminates	Well owner responsible for testing the water quality
All maintenance on system is performed by municipality	Well owner responsible for maintenance of well

For complete confidence in your well system, trust Clean Water Testing's friendly, fully licensed and insured inspection service representatives.

Water Testing
Services

Clean Water Testing, a state-certified laboratory, has been helping customers since 1985. It's easy to have your water sample tested for everything from bacteria to nitrates to arsenic.

The following are contaminants found in residential Wisconsin wells:

- ► Coliform Bacteria
- ► Nitrate
- ► Nitrite
- ► Arsenic
- ► Lead
- ► Copper
- ► Fluoride
- ► Sulfates
- ► Chlorides
- ► Iron Bacteria
- ► Sulfur Bacteria
- ► VOCs

A home's well water can become contaminated at any time without one's knowledge. Common causes include failure of the well or septic system, livestock waste, agricultural and lawn chemicals, and naturally occurring elements. Testing is the only way to know your well water is safe.

PROVEN RESULTS:

- Clean Water Testing has earned the respect of both state agencies and homeowners alike.

- Receive accurate testing along with prompt and professional service and consultation.

Get the security of knowing your water is clean and safe.

Septic Systems
Inspections

Septic system costs can range anywhere from $2,000 to $15,000. Keeping this important home investment in good working order calls for regular, professional inspections.

Septic system headaches and repair costs can be easily avoided. Simply have your septic system inspected by a professional any time, and especially before you buy or sell.

SERVICES INCLUDE INSPECTION OF:

- Septic system
- Drain field
- Pumping chambers
- Mounds
- Baffles
- and much more

Clean Water Testing inspection service professionals have the training and experience to keep your system operating perfectly.
